## ELITE TRAFFIC LANE CLEANER INDUSTRIAL STRENGTH CARPET CLEANER

- Water Soluble
- Effectively Breaks-Down Soiling
- Powerful Formula

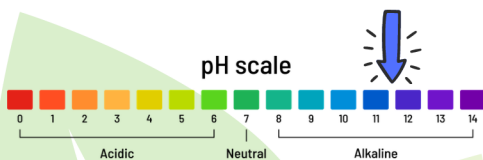

## Description:

ELITE Traffic Lane Cleaner 5L is a professional, industrial-strength pre-spray detergent developed to tackle heavy soil build-up in high-traffic carpet areas before extraction cleaning.

Formulated to break down hardened dirt and greasy soiling, it helps improve overall cleaning results by loosening stubborn contamination ahead of the main extraction process. This makes it particularly useful for entrance areas, walkways and other frequently used carpeted spaces where dirt becomes deeply embedded over time.

Supplied as a blue, water-soluble liquid with a concentrate pH of 11.5, it should always be tested for colour fastness before use.

## Useful Information:

Product Code:	2531
Product Colour:	11.5
Product Fragrance:	Glycol
pH Level:	11.5

## Directions:

Traffic Lane Cleaner should be used as a pre-spray treatment on heavily soiled or high-traffic carpeted areas before the main extraction cleaning process. Begin by thoroughly vacuuming the carpet to remove loose dirt and debris. Dilute the product at a ratio of 1:20 with water, then spray directly onto the affected areas, ensuring even coverage over the soiled traffic lanes. Allow the solution to remain in contact with the surface for up to 5 minutes to help break down hardened and greasy soil deposits, then extract as part of the cleaning process using Elite Extraction Clean. Always carry out a colour-fastness test on a small, hidden area before use by rubbing with a white cloth dampened in the diluted solution; if colour transfers, do not use. Do not apply to materials that are intended for dry cleaning only.

When handling and using the product, suitable protective gloves and eye protection should be worn, and the container should be kept tightly closed and stored in a cool, well-ventilated area after use.
