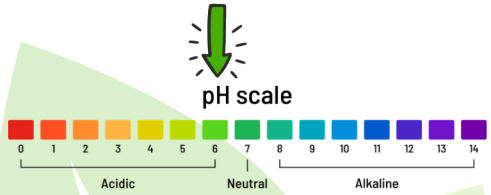
NEUTRACLEAN

EMULSIFIED DEGREASER DETERGENT

- Taint free
- Non-foaming
- Powerful Formula

Description:

ProJanta Neutraclean 5L is an effective detergent degreaser formulated to remove food oils, fats and general greasy soiling from impermeable surfaces. Made with emulsifiers, it is designed to tackle vegetable oils, animal fats, mineral oils and grease, making it particularly suitable for demanding cleaning tasks in food production and industrial environments. Its pH-neutral, odourless formula makes it ideal for use where a low-odour product is preferred, and where solvent- or alkaline-sensitive surfaces need to be cleaned safely and efficiently. Recommended for kitchens, bakeries, savoury snack factories and meat processing plants, it is also well suited to garages and engineering works for cleaning floors, equipment, fixtures and fittings. Supplied as a blue liquid, it can be applied by mop, spray or cloth.



Useful Information:

Product Code:	260605
Product Colour:	Blue
Product Fragrance:	Almost Odourless
pH Level:	5.5 - 7.5

Directions:

Neutraclean should be diluted with clean warm or hot water according to the level of soiling and the intended application. For the removal of grease, fats and heavier deposits, dilute at 1:20 and apply using a mop and bucket, spray bottle or cloth, ensuring thorough coverage of the surface. For general cleaning, dilute at 1:200 with clean warm or hot water and use across impermeable surfaces requiring routine maintenance. The product is suitable for use in food production environments including kitchens, bakeries, savoury snack factories and meat processing plants, as well as in garages and engineering works for cleaning floors, equipment, fixtures and fittings. It is also suitable for solvent- and alkaline-sensitive surfaces where a pH-neutral degreaser is required.

When handling and applying the product, wear protective rubber gloves and safety glasses or chemical goggles, ensure good ventilation in the working area, and wash hands and exposed skin thoroughly after use.
